LIBRARY MANGEMENT SYSTEM

The biggest issues with the current library system are that it is outdated with outdated practices. These main issues deal with no software presence with no database containing the media items or the library members. Media is checked out with paper slips found on the back with the customer's name, a check-in, and check-out date. Dealing with overdue media is an issue as well as there is no system in place for accepting the payments of fines and it is only possible to do in person with cash.

With this new system all of these issues will be solved. There will be two separate databases keeping track of the library media along with the library users. There will be a way of tracking check-in and checkout dates, inventory, and fines for each user. This will streamline the process of these processes for the library system moving forward. The next page will show screen shots of the system to show how it works.
